

I build websites and apps that simply work. Well.

Hi, my name is Paweł and I am an experienced web developer. I create, develop and maintain modern websites, applications and web tools - from simple landings to complex e-commerce systems and games. I focus on quality, performance and real user value.

I am a web developer by passion and experience.

I have been working as a full stack web developer since 2013. In more than a decade I have completed dozens of projects - from simple websites and quizzes to complex product configurators, e-commerce applications and 2D/3D games.

I have worked on applications using geolocation, Facebook API, integrations with external APIs or even interaction with entire movie theaters, among others.

I'm self-taught - I've worked my way from jQuery to Angular, AureliaJS to React/Next.js. On a daily basis I work with technologies such as React, Node.js, WordPress, Tailwind, GraphQL and Docker. I'm comfortable with both front-end and back-end, and I treat new tools and frameworks as opportunities for growth.

I focus on pragmatism, clean code, collaboration and knowledge sharing. I enjoy learning by doing and solving real-world problems.

Skills I bring to the team.

Front-end technologies:

- React, Next.js, Remix, Astro, TypeScript, JavaScript (ES6+)
- Tailwind CSS, Radix UI, Material UI, SCSS, Styled Components
- Lexical, Zod, tRPC, React Query, Next-Intl

Back-end technologies:

- Node.js, Express, GraphQL, REST API
- WordPress (custom plugins, themes, Gutenberg), PHP
- Payload CMS, Redis, MySQL

Dev & Tooling:

- Docker, Turborepo, Git, Vitest, Playwright, Storybook, Testing Library
- Google Tag Manager, Sentry, Cloudflare, ESLint

Soft and organizational skills:

- Collaborating with UX, marketing and back-end teams
- Creating solutions that align with business goals
- Attention to productivity, reducing technical debt
- Knowledge sharing, mentoring, self-starter

Other:

- Integrations with external APIs (Exponea, eTrusted, Dofinder, Adyen)
- Creating and developing scripts and tags in GTM
- Handling domains, mailboxes, DNS configurations, post-implementation support

What have I been doing for the past years?

artgeist sp. z o.o.

Front-end Developer / September 2021 - July 2025

I designed and built the front-end of the bimago.pl e-commerce platform using Next.js. I was responsible for creating landing pages, reusable modules, and templates (for both Magento 1 and 2), as well as implementing new features and maintaining high-quality front-end architecture. My role also included performance optimization—including work with React Server Components (RSC)—and code quality management.

In addition, I developed custom GTM scripts and companion applications, and integrated external systems such as Exponea, eTrusted, Dofinder, and Adyen.

Stack: React, Next.js, TypeScript, tRPC, React Query, Next-Intl, Radix UI, Payload CMS, Lexical, Material UI, Zod, SCSS, Tailwind, Docker, Redis, Vitest, Playwright, GTM, Sentry

Other technologies: Magento 1/2, Joomla, jQuery, Prototype, Backbone, PHP, LESS, MySQL, Composer, Solr, Kubernetes

konceptika

Fullstack Developer / July 2013 - August 2021

I led complex projects, handling front-end, back-end, servers, and integrations. I built applications, online editors, configurators, Facebook apps, and e-commerce sites (PrestaShop, WordPress). I developed custom templates and plugins, as well as API and GTM integrations.

Stack: JS, TypeScript, React, Redux, Next.js, WordPress, PHP, SCSS, Tailwind, Styled Components, Material UI, MySQL, GraphQL, Firebase, Facebook API, GA, GTM, Docker, Git

Libraries and engines: FabricJS, PixiJS, ThreeJS, BabylonJS, AnimeJS.

Freelance

Fullstack Developer / 2006 - present

I support clients with web projects - from planning and UX/UI, to development and integration, to maintenance. I create websites, apps, games and tools, and also help with domain, Cloudflare, WordPress and GTM configurations.

Stack: JS, TypeScript, React, Remix, Astro, Next.js, WordPress, WooCommerce, WP Themes & Plugins, Gutenberg, PHP, SCSS, Tailwind, BabylonJS, Git, Docker, Cloudflare, GA, GTM, Sentry, GlitchTip

After work

After hours: full-time dad - which hardens patience and teaches time management :) When I find a moment, I experiment with microcontrollers (ESP32), retro computers, run a mini homelab and revisit classic literature (The Hobbit, Saramago) or zombie movies.
